DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,4,5,7,8,13 are rejected under 35 U.S.C. 102(b) as being anticipated by Varkony. This patent discloses a mixing shaft including a steel core coated with a wear material along with mixing elements that are also coated. Note that the particular material being treated does not further limit the structure of an apparatus claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,6,9-12,14,15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Varkony. The limitations of these claims would have been obvious modifications once the basic apparatus was known. For example, the use of stainless steel for shaft material is well known in the art and of no patentable merit. Also, the

placement of the mixing elements would depend on several factors such as material being treated and desired end results. Finally, for apparatus claims, the method of making the article is not further limiting to the claimed structure.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Varkony as applied to claim 1 above, and further in view of Mazowski. Varkony uses rubber as a coating material. This may not be proper for various types of material being treated. Mazowski solves this problem by disclosing similar apparatus including the use of teflon as a coating material. In order to be able to treat various materials, it would have been obvious for one of ordinary skill in the art to modify Varkony by using Teflon as the coating material, taught to be desirable by Mazowski.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
